SUMMARY

Electronics & Telecommunication Engineering graduate with expertise in Java, Full-stack development, and excellent problem-solving skills. Completed an internship at EY GDS and was a finalist at Smart India Hackathon 2024. Solved over 248 LeetCode problems. Looking to build quality software in a practical and dependable way.

EDUCATION

B.E. – Electronics & Telecommunication Engineering *2022 – 2026*
NBN Sinhgad Technical Institute Campus, Pune CGPA: 8.69 / 10

HSC – 12th Grade *2021 – 2022*
Kendriya Vidyalaya, Rajasthan 89.6%

SSC – 10th Grade *2019 – 2020*
St. Paul's Sr. Secondary School, Rajasthan 88.4%

TECHNICAL SKILLS

Languages: Java, JavaScript (ES6+)
Frontend: React.js, HTML5, CSS3
Backend: Node.js, REST API Design
Databases: MySQL
Concepts: OOP, DBMS, Data Structures & Algorithms
Tools: Git, GitHub, VS Code, Vercel

INTERNSHIP EXPERIENCE

MERN Stack Developer Intern · EY GDS – Next Gen Internship *Dec 2024 – Jan 2025*

- Developed a Digital Payment Wallet with MERN stack, involving the implementation of the process of users registration, login, creation of UPI ID, maintaining of wallet balance, and session management.
- Created REST APIs using Node.js and Express.js, including the authorization and authentication procedures, endpoints for managing users and data, and money transfers between entities.
- Designed the money transfer mechanism with UPI ID validation, withdrawal from the sender's balance, top-up of the receiver's balance, and withdrawal with the transaction history update.
- Engineered MongoDB/Mongoose database schemas and models to store users' credentials and data, UPI ID, wallet balance, and transaction details with timestamps.
- Built an Admin Dashboard with React.js and Material UI to manage the users, observe the money balance, check their transaction history, and analyze transaction statistics.
- Utilized Chart.js library and React.js components to build the UI/UX for the user and admin dashboards and designed the following screens: wallet, transfers, authorization, profile, and transaction history.

PROJECTS

CodeFlow Copilot *GitHub →*
FastAPI · React.js · Python · SQLite · Gemini API

- Developed CodeFlow Copilot, an AI-powered full-stack developer assistant, capable of analyzing common programming errors, explaining them and suggesting possible fixes, documenting code, and generating Git commit messages, thus reducing time spent debugging and understanding code.
- Built a modular React.js + FastAPI application utilizing Google Gemini AI and SQLite database, exposing REST API endpoints for error analysis, code reviews, documentation, committing messages, search history, and usage statistics.
- Designed the system to allow developers to centralize common operations related to their day-to-day work in one place, helping to debug code, review solutions, document code, and have error analysis history rather than using different tools for each task.

Digital Payment Wallet *GitHub →*
MongoDB · Express.js · React.js · Node.js · Material UI

- A digital payment wallet developed with MERN stack that allows users to register, log in, auto-generated UPI ID, manage their wallet balance, and perform money transfers.
- Developed REST APIs with Node.js and Express.js that handled user authentication, retrieve wallet balance, transfer money, transaction history, and admin user management, recipient's UPI validation, and wallet balance check procedures.
- Built a dashboard system with React.js and chart.js to visualize wallet balance, history, and transactions and stored user data in a MongoDB database using Mongoose ORM.

Smart Expense Manager *GitHub →*
HTML5 · CSS3 · JavaScript · Chart.js · localStorage

- Created the expense management software involving in monthly budget setting, expense tracking organized by category, and expenditure visualization with the help of JavaScript and Chart.js.
- Developed an application with the ability to import and export CSV files, add receipts, search, filter, paginate, and light/dark modes for better performance.
- Utilized localStorage to store the data locally in the user's browser to provide a more personalized experience while using the app.

CERTIFICATIONS

- Java Training – IIT Bombay (Spoken Tutorial)
- Problem Solving (Basic) – HackerRank
